## **DETAILED ACTION**

### ***Specification***

1. The disclosure is objected to because of the following informalities: at page 4, line 8 "aperture 21" should have been "aperture 24", according to the figures.

Appropriate correction is required.

### ***Claim Rejections - 35 USC § 112***

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Claim 2 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claim 2, it cannot be understood what "an oversized aperture in said body mounting plate" is referring to. The disclosure only addresses that apertures 24 and 22 are of oversized ("slightly larger than the shank of bolt 31"). There is no sufficient information referring to the aperture for bolt 20.

### ***Claim Rejections - 35 USC § 103***

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Art Unit: 3676

5. Claims 1-13 are rejected under 35 U.S.C. 103(a) as being unpatentable over Venier (5,624,150) in view of Bisbing (5,150,500).

'150 discloses a vehicle door having two hinges (see fig. 3). Each hinge has a door mounting plate (10), a pin (7), a hinge plate (5), and attaching means (31, 21, P5A, P4A). '150 does not show a body-mounting plate. '500 teaches a hinge having a hinge plate (28) with concave surface (50), a body plate with a convex surface (32), and adjustable attaching means (42, 52, 44) to enable the hinge to be adjusted easily and accurately to prevent the misalignment of a door. It would have been obvious to one of ordinary skill in the art at the time the invention was made to modify the hinge of '150 with a concave hinge plate and a convex body-mounting plate as taught by '500 so that the hinge can be adjusted to prevent misalignment of a door.

As to claim 3, the examiner takes Official Notice that forming oversized fastener apertures in a hinge plate for positioning adjustment is well-known and common practice in the art. It would have been obvious to one skilled in the art to form the attaching apertures in the body-mounting plate of '500 with oversized apertures to provide positioning adjustment of the plate.

Note that functional limitation in claim 4 is conditional. As to claims 9 and 13, the convex area (32) is larger than the concave area (50) in order to allow the hinge plate to slide for adjustment (see fig. 4).

**Conclusion**
